Translution

PARTNER FACTSHEET

MOBILE TRANSACTION PROCESSING

Our mobile solutions allow you to streamline your inventory physical counts, purchase order receiving, job issues, inventory movements, sales order picking and much more, using handheld devices or a desktop PC. The information you enter is validated in real-time, saving errors, increasing stock accuracy and production efficiency and adding value to your company.

The Benefits of Translution

- Simplified and accurate data capture
- Barcode scanning functionslity for improved accuracy
- Flexible and scalable
- Improved stock control and stock accuracy
- Capture live shop-floor data for accurate production planning and management
- A simple user interface with easy-to-read screens

- Fast and logical entry
- Integration with SYSPRO and the ability to post transactions directly
- Track labour and raw materials to improve production efficiency
- Replaces spreadsheets and clipboards, automating manual tasks and making management information available in real-time

Translution In Use

Translution™ is often used to improve many standard processes such as receiving and dispatch. Here are some of the more common implementations of Translution™.

Receiving

At receiving, goods are labelled and scanned. Translution™ validates items and quantities against the purchase order and the data is posted to SYSPRO for creation of Goods Received Notes.

Warehouse Management

Translution™ supports a wide range of inventory management functions, such as purchase order receiving, goods in transit transactions, standard inventory transactions, stock-take and cycle counts. Posting data directly to SYSPRO allows for accurate stock control and warehouse management.

Put-away received goods - Product put-away can be managed using put-away rules. Translution™ allows fully directed put-away where the user scans the system directed target bin, as well as partially directed or undirected put-away.

Moving items around a warehouse - There are many reasons that items are moved in a warehouse. Translution™ allows users to move stock to replenish a pick-face;pack, unpack or move pallets; or simply reorganise bin contents.

Stock adjustments / stock-take / cycle count - Warehouse stock accuracy is maintained by doing regular stock-takes and cycle counts. Performing adjustments to correct errors is a key part of this process.

Product Tracking

Labour tracking - Tracking labour in real-time is a key component of successful management and control. Accurate data provides visibility of operation progress, a base from which to develop accurate future schedules, as well as an information store about operational activities.

Material tracking - From scanning raw materials to the factory floor and issuing items to jobs, to scanning finished goods off the line and posting job receipts, Translution™ delivers a complete material tracking solution to meet your needs.

Sales Order Management

Picking - In smaller warehouses picking individual orders works well. In warehouses with high volumes it is often necessary to pick groups of orders together to improve efficiency. Translution™ allows orders to be grouped to support picking options.

Checking - Translution™ allows seamless management of the checking process and assists with box packing, labelling and invoice creation and printing.

Dispatching documents - It is possible to choose the outcome of the dispatch process - invoice creation only, invoice creation and printing, dispatch note creation.
